
FLUID/PARTICLE SEPARATION JOURNAL

COVERING

Research and development, graduate student contributions, elementary and advanced tutorials, chapter activities, and educational affairs, news from industry and government, and employment opportunities.

a Publication of

THE AMERICAN FILTRATION SOCIETY

devoted to

All aspects of fluid/particle separation

Volume 3, Number 1, March, 1990

TABLE OF CONTENTS

Corporate Members	1M
Speaker's Bureau	5M
Chapters	7M
The International Scene	8M
Technology Transfer	13M
Publications	14M
Book Review	15M
Personalities	16M
The Shoemaker's Column, Wells Shoemaker	17M
Chairman's Report and Challenge to the Members	18M
Colloid and Interface Science <i>In Support of Interfacial Engineering</i> , H. Ted Davis	M19
Image Processing and Analysis of Sedimenting Suspensions, B.V. Ramarao and R.H. Weiland	1
Correlations of Gulf Coast Shale Permeability and Resistivity: Application to Disposal Well Integrity Tests, Jean-Louis Alixant and W. David Constant	19
Improved Centrifuge Designs for High Cake Solids, Orris E. Albertson	29
Fluid/Particle Separation and Coal Cleaning: Progress, Potential Advances, and Their Effects on FGD, C. David Livengood and Richard D. Doctor	36
Dense-Medium Cycloning, Olufemi Olajide and Eung Ha Cho	40
A Tutorial on the Optimization of the Flocculation Sequence, B.J. Scheiner	46
Out of the Past	50
Thickening Calcium Carbonate Slurries, E.W. Comings	51

PURPOSE OF THE JOURNAL

Fluid-particle separation is a part of many fields including mining, environmental, pulp and paper, paints and coatings, food and beverages, coal, chemicals, automotive, drilling and production of petroleum, ceramics, biotechnology, air conditioning, clean rooms, electroplating, metal working, laundries, swimming pools, and pharmaceutical manufacture. Particles are encountered in ionic, macromolecular, micron, and millimeter sizes. They occur in many forms including suspensions, colloids, emulsions, foams, dusts, flocs, micro-organisms, drops, pigments, aerosols, and pollen. Fluid-particle separation operations include cake filters, deep beds, clarifiers, thickeners, centrifuges, hydrocyclones, gas cyclones, membranes, reverse osmosis, electrodialysis, coalescers, scrubbers, electrostatic precipitators, expression, flotation, and heavy media separation. The *Fluid/Particle Separation Journal* provides an outlet for practical and theoretical contributions to fluid-particle separation and allied areas. It seeks to unite theoreticians and practitioners from many different fields by emphasizing the common principles which apply to fluid-particle separations wherever they may be encountered.

The *Journal* intends to satisfy the multifaceted needs of theoreticians and practitioners, salesmen and managers, manufacturers and users of equipments, and federal and local government agencies. It faces the challenge of charting a path leading to recognition of fluid-particle separation and processing and allied areas as a recognized branch of engineering and science.

The general structure will initially assume the following form:

1. Information concerning the Society
2. News and exchange with other societies
3. Discussion of current important issues
4. Research contributions
5. Practical contributions
6. Papers from graduate students
7. Tutorials
8. Educational issues
9. Comments from members
10. Local section activities
11. Advertisements

Subscriptions: The *F/PSJ* is published quarterly. The annual subscription is \$35.00. Single copies are \$10.00. Overseas surface postage charges are \$10.00 for a total of \$45.00. Airmail postage is \$18.00 for a total of \$53.00.
