
FLUID/PARTICLE SEPARATION JOURNAL

COVERING

Research and development, graduate student contributions, elementary and advanced tutorials, chapter activities, and educational affairs, news from industry and government, and employment opportunities.

a Publication of

THE AMERICAN FILTRATION SOCIETY

devoted to

All aspects of fluid/particle separation

Volume 4, Number 4, December, 1991

TABLE OF CONTENTS

Purpose of the Journal.....	1 D
Corporate Members.....	2 D
American Filtration Society Officers	6 D
Chapter Directory.....	6 D
Corporate Profiles.....	8 D
Personalities.....	9 D
Society News.....	10 D
Stop, Look, and Read	12 D
Education and Research.....	15 D
Conferences	28 D
Shoemaker Column.....	33 D

TECHNICAL PAPERS

A Systematic Approach for Optimal Filter Selection by Analysis of Constituents in Melt Polymer Processes, Seyda Ayral.....	184
Removal of Toxic Metals from an Industrial Wastewater Using Flocculants, Olice C. Carter, Jr. and B.J. Scheiner.....	193
Phase Transition for Porosimeter (PTP) in Application, B.V. Enüstün and B.W. Gunnink.....	197
Technical and Practical Aspects of Centrifuge Application and Performance—Part II, Charles Grichar	200
Good Solids Control Prevents Formation Damage, Vincent D. Leone	201
Gravitational Processes, Derek B. Purchas	202
Simulation of the Effects of Shale Heterogeneities on Effective Permeability in Deep Well Injection Disposal Systems, Seung-Whee Rhee and Danny D. Reible	204
The Application of Turbidity Measurement in Oil Field Production in Water Filtration, William H. Wynn.....	211
Out-Of-The-Past Mechanism of Filtration, Arthur W. Hixson, Lincoln T. Work, and Isaac H. Odell, Jr.....	215
Index for 1991.....	226

PURPOSE OF THE JOURNAL

Fluid -particle separation is a part of many fields including mining, environmental, pulp and paper, paints and coatings, food and beverages, coal, chemicals, automotive, drilling and production of petroleum, ceramics, biotechnology, air conditioning, clean rooms, electroplating, metal working, laundries, swimming pools, and pharmaceutical manufacture. Particles are encountered in ionic, macromolecular, micron, and millimeter sizes. They occur in many forms including suspensions, colloids, emulsions, foams, dusts, flocs, micro-organisms, drops, pigments, aerosols, and pollen. Fluid-particle separation operations include cake filters, deep beds, clarifiers, thickeners, centrifuges, hydrocyclones, gas cyclones, membranes, reverse osmosis, electrodialysis, coalescers, scrubbers, electrostatic precipitators, expression, flotation, and heavy media separation. The *Fluid/Particle Separation Journal* provides an outlet for practical and theoretical contributions to fluid-particle separation and allied areas. It seeks to unite theoreticians and practitioners from many different fields by emphasizing the common principles which apply to fluid-particle separations wherever they may be encountered.

The *Journal* intends to satisfy the multifaceted needs of theoreticians and practitioners, salesmen and managers, manufacturers and users of equipments, and federal and local government agencies. It faces the challenge of charting a path leading to recognition of fluid-particle separation and processing and allied areas as a recognized branch of engineering and science.

Subscriptions: The *F/PSJ* is published quarterly. The annual subscription is \$35.00. Single copies are \$10.00. Overseas surface postage charges are \$10.00 for a total of \$45.00. Airmail postage is \$18.00 for a total of \$53.00.
