

P6 SOLIDS SEPARATION IN BEER BREWING

Travis Audet, Anheuser-Busch

Anheuser-Busch Zone Technical Expert will review the multiple solids separation steps in brewing great beer. Whirlpooling, settling, centrifugation, flocculation, solids precipitation and depth filtration in the brewing process will all be covered. The presentation will be utilizing knowledge gained from brewing Budweiser since 1876 so there will be a few ideas that can be gleaned that can be applied to other industries.
