

A PATH TO MULTI-PASS TESTING CONSISTENCY

Laine Major¹, Adam Burnett¹, Don Avery¹

¹Lydall Performance Materials

Within the world of Multi-pass filter performance testing, which spans many applications from hydraulic filtration to automotive transmission filtration, there exists the classic problem of performance testing devices not providing consistent results across different devices. This creates many inefficiencies within these industries because measurements taken on a supplier's Multi-pass test stand rarely match the measurements taken on a customer's test stand. The use of an industry-wide "control" media or "control" filter does not currently exist, and this is a story of why we believe one should, and why it's possible.
