

NANOFIBER: A REALITY CHECK

Andrew McDowell¹, Alan Smithies¹

¹NXTNANO

For the past decade or so, you've been hearing from the global scientific community and academia about the advancements in nanofiber technology. From the latest advancements in producing nanofibers to radically innovative new nanofiber products, there seems to be no shortage of news. However, it's now time to share with you a touch of reality.

Join us, to gain insight into which applications nanofiber based products are being adopted today, with specific emphasis on filtration. This presentation will allow the attendee to attain an understanding of how nanofibers benefit various applications, what technical challenges they solve, and how they deliver value to the end customer across an array of industries. In addition, learn how nanofibers are fast becoming a commercially viable technology and reaching new applications daily.

If you're an application's engineer or product development engineer within the global air or liquid filtration industry, this presentation is a must-see for you.
